

## Hemoglobin

**Result : 200**

A creatinine blood test measures the level of creatinine in the blood.

Creatinine is a waste product that is formed when creatine, which is found in the muscles, breaks down.

Creatinine is filtered out of the body from the kidneys. So, Creatinine levels in the blood can tell the doctor how well the kidneys are filtering.

### Cause / Effect of these parameters

High levels of creatinine in blood may mean the kidneys are getting damaged

### What can you do about it?

You are doing well to keep your Creatinine levels in control.

Keep yourself well hydrated by drinking plenty of water on a daily basis if your doctor allows.

Avoid over the counter medicines and always consult your doctor before taking any medications.
